

# **HOW TO APPLY THE MULTIPHASE OPTIMIZATION STRATEGY (MOST) IN YOUR INTERVENTION DEVELOPMENT RESEARCH**

## **Module 6**

**Completing the optimization phase and  
identifying your next steps**

### **Lesson 5: Review of Module 6**

**NYU**

**SCHOOL OF GLOBAL  
PUBLIC HEALTH**

**Intervention Optimization Initiative**

# **This course was developed by**

**Linda M. Collins**

School of Global Public  
Health

New York University  
(narrator)

**Kate Guastaferro**

College of Health and  
Human Development

The Pennsylvania State  
University

**NYU**

**SCHOOL OF GLOBAL  
PUBLIC HEALTH**

**Intervention Optimization Initiative**

# In this lesson you will:

- Review what you have learned in Module 6

**NYU**

**SCHOOL OF GLOBAL  
PUBLIC HEALTH**

**Intervention Optimization Initiative**

# **Course learning objective**

## **Learn how to:**

- Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Based on the results of a factorial optimization trial and your optimization objective, identify the optimized intervention**

- You have learned how to:
- Understand what it means to conclude the optimization phase of MOST

Course learning objective: Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Based on the results of a factorial optimization trial and your optimization objective, identify the optimized intervention**

- You have learned how to:
- Be aware of the need to stay current with the rapidly changing field of decision-making for intervention optimization

# **Module 6 learning objective: Based on the results of a factorial optimization trial and your optimization objective, identify the optimized intervention**

- You have learned how to:
- Understand what are current best practices for empirically identifying an optimized intervention

Course learning objective: Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Based on the results of a factorial optimization trial and your optimization objective, identify the optimized intervention**

- You have learned how to:
- Implement current best practices in an example

Course learning objective: Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Based on the results of a factorial optimization trial and your optimization objective, identify the optimized intervention**

- You have learned how to:
- Relate the decision-priority perspective to identification of the optimized intervention

Course learning objective: Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Decide what your next steps will be after completion of the optimization phase of MOST**

- You have learned how to:
- Understand the alternative possibilities for next steps

Course learning objective: Complete the optimization phase of MOST and identify next steps

# **Module 6 learning objective: Decide what your next steps will be after completion of the optimization phase of MOST**

- You have learned how to:
- Relate the resource management and continual optimization principles to the decisions about next steps

Course learning objective: Complete the optimization phase of MOST and identify next steps

Congratulations! You have completed  
Module 6
